M65856SP

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

DESCRIPTION

The M65856 is a CMOS IC built-in Digital Echo function with microphone peripheral circuits for "Karaoke" equipment packed in a single chip.

It is suitable for "Karaoke" equipments such as Video CD Player, Mini Stereo, CD-Radio Cassette, TV or VCR.

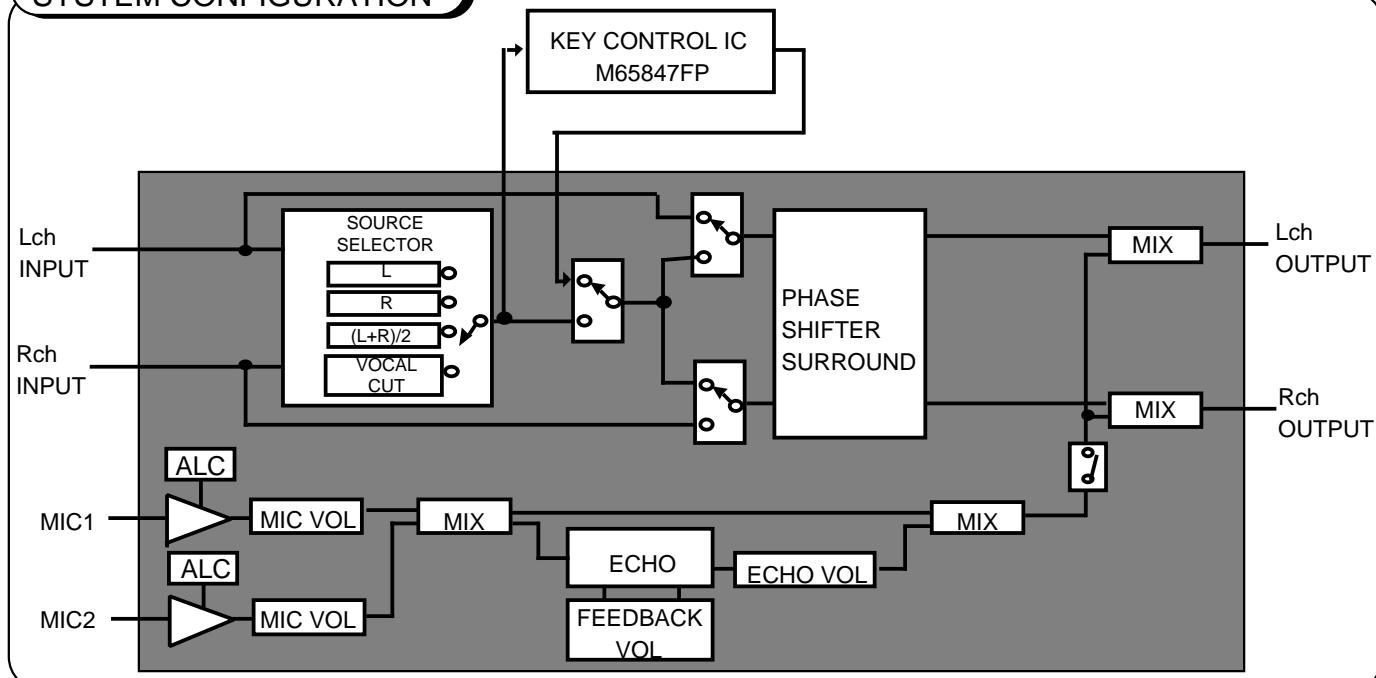

FEATURES

- High performance digital echo circuit thanks to 16Kbit memory
- Built-in surround function which works Simulated Stereo for monaural source and Stereo Surround for stereo source
- ALC-equipped microphone amplifiers permit excessively high input. ALC operating voltage can be set as desired.
- 2 microphone volumes, echo effect volume and echo feedback volume are included
- Stereo microphone-line mixing amplifiers
- Karaoke entertainment functions such as vocal cut and automatic vocal support system
- Built-in interface terminal for external keycontrol IC
- Built-in current-control oscillation circuit
- Built-in automatic reset circuit activated with power on
- 5V single power supply

RECOMMENDED OPERATING CONDITION

- Supply voltage range Vcc = 4.5 ~ 5.5V
- Rated supply voltage Vcc = 5V

SYSTEM CONFIGURATION

PIN CONFIGURATION

MIC SW	1	DATA
MCLKCONT	2	CLOCK
VALC	3	LATCH
MIC1IN	4	PS2
ALC1	5	PS1
MIC1NFIN	6	VCFIL
MIC1OUT	7	LOUT
MIC1VOLIN	8	ROUT
MIC2IN	9	SOURCEOUT
ALC2	10	KEYCONIN
MIC2NFIN	11	RIN
MIC2OUT	12	LIN
MIC2VOLIN	13	VOL IN
MICOUT	14	LPF1OUT
LPF1IN1	15	LPF2IN1
LPF1IN2	16	DAINTOUT
LPF1OUT	17	DAINTIN
ADINTOUT	18	DACONT
ADINTIN	19	VCC
ADCONT	20	GND
REF	21

PIN DESCRIPTION

Pin No.	Symbol	Name	I/O	Function
1	MIC SW	Microphone SW	I	L: MIC OFF H: MIC ON
2	MCLKCONT	Clock control	-	Controls built-in clock generation circuit with external R
3	VALC	ALC operating voltage setting terminal	-	To set ALC operating voltage according to applied voltage
4	MIC1IN	Microphone 1 input	I	To connect MIC1
5	ALC1	ALC1 control	-	To connect ALC1 attack / recovery time setting capacitor
6	MIC1NFIN	Microphone 1 negative feedback input	I	To connect low cut-off frequency of MIC1 amplifier setting capacitor
7	MIC1OUT	Microphone 1 output	O	
8	MIC1VOLIN	Microphone 1 volume input	I	To connect capacitor to reduce noise generated at time of volume change
9	MIC2IN	Microphone 2 input	I	To connect MIC2
10	ALC2	ALC2 control	-	To connect ALC2 attack/recovery time setting capacitor
11	MIC2NFIN	Microphone 2 negative feedback input	I	To connect low cut-off frequency of MIC2 amplifier setting capacitor
12	MIC2OUT	Microphone 2 input	I	
13	MIC2VOLIN	Microphone 2 volume input	I	To connect capacitor to reduce noise generated at time of volume change
14	MICOUT	Microphone output	O	Mixing output of MIC1 and MIC2
15	LPF1IN1	Low pass filter 1 input 1	I	Pre-filter before A/D convertor for digital delay
16	LPF1IN2	Low pass filter 1 input 2	I	
17	LPF1OUT	Low pass filter 1 output	O	
18	ADINTOUT	A/D integrator output	O	Composes D/A conversion integrator with external capacitor
19	ADINTIN	A/D integrator input	I	
20	ADCONT	A/D control	-	To determine adaptive time constant of A/D convertor with ADM system
21	REF	Reference power output	-	To connect 1/2 Vcc output and filter capacitor

FUNCTION DESCRIPTION

OPERATION MODE

Operating modes can be set with serial data 16-bits entered at the timing given below.

DATA(pin42) is taken inside at the rising edge of CLOCK(pin41) and the last-packed 16-bits are latched at the raising edge of LATCH(pin40).

DATA		FUNCTION	Control description	DATA		FUNCTION	Control description	
D0	D1	Digital echo	Creates four kinds of delay signals between 104.0msec and 208.1msec.	D0	D1	Echo effect Volume	Sets volume attenuation in 8 steps between +3dB ~ -15dB and - .	
	D2				D2			
	D3				D3			
	D4	Source selector	Desired audio source operation to each "karaoke" software can be selected by the Source selector. 5 kinds		D4	Echo Feed Back Volume	Sets volume attenuation in 5 steps between -2dB ~ -7dB and - .	
	D5				D5			
	D6				D6			
	D7	Phase shifter surround	Surround is formed with phase shifter to increase the ambience of sound even when karaoke is used.		D7	MIC1 Volume	Sets volume attenuation in 8 steps between 0dB ~ -18dB and - .	
	D8				D8			
	D9	Auto vocal support ON / OFF	If you are in discomfort from unknown song, the vocal of the singer can be output support you. Selector switch for turning on/off of auto vocal support.		D9			
	D10				D10	MIC2 Volume	Sets volume attenuation in 8 steps between 0dB ~ -18dB and - .	
	D11	MIC SW ON / OFF	Selector switch for turning on/off of microphone signal mixing.		D11			
	D12,D13	TEST mode			D12			
	D14	ADDRESS	Data is taken inside D14=[L],D15=[H],and others cancel.		D14	ADDRESS	Data is taken inside D14=[L],D15=[H],and others cancel.

FUNCTION CONTROL

• DELAY TIME CONTROL

Control Data				Delay time
D0	D3	D2	D1	
L	L	L	-	104.0msec
	L	H	-	138.7msec
	H	L	-	156.0msec
	H	H	L	208.1msec
	H	H	H	Delay off mode

• SOURCE SELECTOR

Control Data				Source select
D0	D6	D5	D4	
L	L	L	L	Lch, monaural
	L	L	H	Rch, monaural
	L	H	-	(L+R) / 2
	H	L	-	Vocal cut
	H	H	-	Stereo

• PHASE SHIFTER SURROUND CONTROL

Control Data			PHASE SHIFTER SURROUND	
D0	D8	D7	Surround SW	Effect
L	L	L	OFF	—
	L	H		LOW
	H	L		MID
	H	H		HIGH

• AUTO VOCAL SUPPORT SWITCH

Control Data		Auto vocal support SW	
D0	D9		
L	L	OFF	
	H	ON	

• Keycontrol IC pass / through SW

Control Data		Remark	
D0	D10	(Notice)	
L	L	Correspond to external Keycontrol	
	H	Uncorrespond to external Keycontrol	

• MICROPHONE MIXING SWITCH

Control Data		MIC SW	Remark
D0	D11		
L	L	OFF	Microphone mixing OFF
	H	ON	Microphone mixing ON

(Notice) Please set source selector except for "stereo" when this switch correspond to external keycontrol, because the output signal for external keycontrol (34pin:SOURCEOUT)is corresponding to only monaural signal. (This IC is not corresponding to external keycontrol,when source selector set up "stereo".)

	L	L	H	-3	-3
	L	H	L	-6	-6
	L	H	H	-9	-9
	H	L	L	-12	-12
	H	L	H	-15	-15
	H	H	L	-18	-18
	H	H	H	-	-

- ADDRESS CONTROL

Control Data			ADDRESS
D0	D15	D14	
L,H	L	L	Data Cancel
	L	H	
	H	L	Data take inside
	H	H	Data Cancel

M65856SP

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

FUNCTION DESCRIPTION

(1) AUTO RESET

Settings are reset automatically when the IC is powered up. The reset state is automatically canceled approximately 120msec after powering up($V_{cc}=5V$ and the capacitor connected to pin C=47 μF).

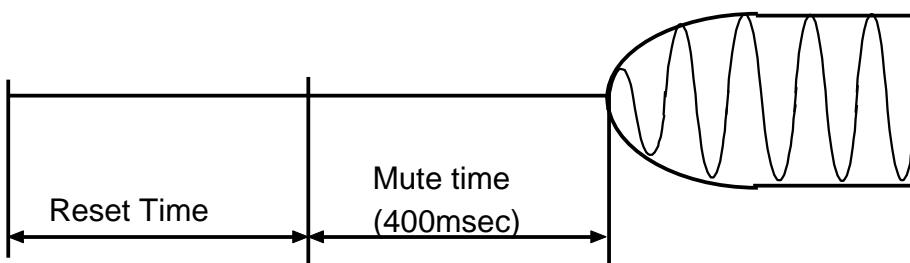

By auto reset, operation mode setting become as follows.

- Delay Time Control : 104.0msec
- Phase Shifter Surround Control : OFF
- KEYCON pass/through SW :ON
- Echo effect Volume : -
- Microphone Volume Attenuation : -9dB
- Source Selector : stereo
- Auto Vocal support Switch : OFF
- Microphone Mixing Switch : OFF
- Echo Feed back Volume : -

(2) AUTO MUTE FUNCTION

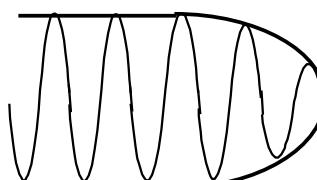

The IC carries out auto mute function at the time of powering up, delay time setting change, in order to suppress shock noise that the digital delay may produce.

- At power up

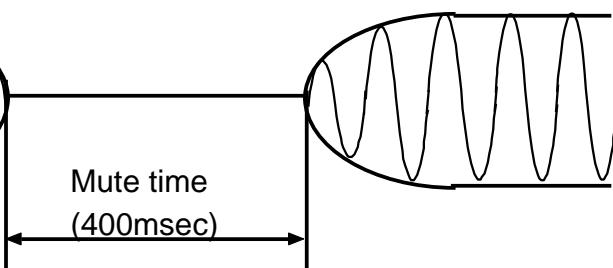

- At delay time setting change

Delay signal before change

Delay signal after change

M65856SP

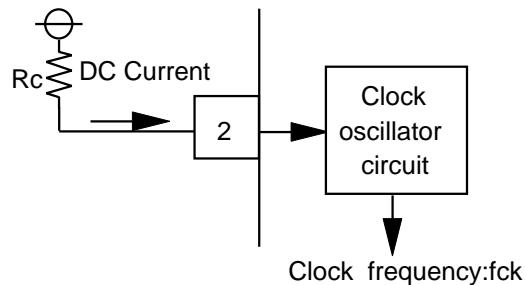

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

(3) Clock oscillator circuit

This IC incorporates a current control type clock oscillator circuit in it, thus providing circuit configuration just by connecting an R_c for current control pin 2 (MCLKCONT). Fully internal clock supply prevents occurrence of undesired radiation without affecting any external circuit.

The oscillator frequency f_{CK} is following.

$$f_{CK} = 2 \text{ MHz} (R_c = 56K)$$

(4) Microphone amplifier

The gain(G_v) and low cut-off frequency(f_{CL}) of microphone amplifier are expressed as follows.

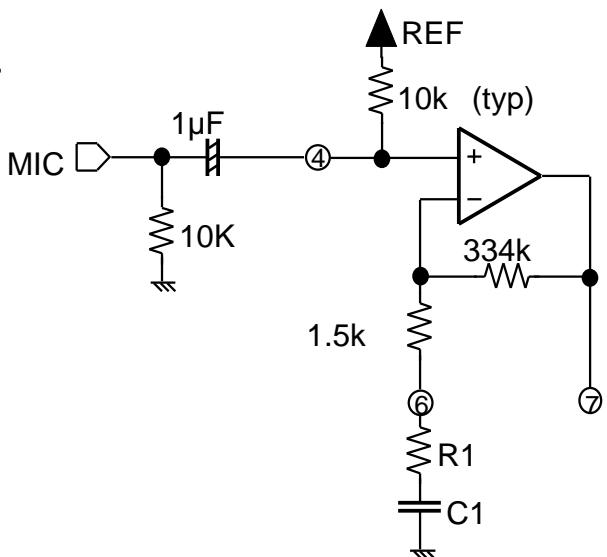

$$G_v = 20 \log \frac{R_1 + 1.5K + 334K}{R_1 + 1.5K} \quad f_{CL} = \frac{1}{2 \cdot (R_1 + 1.5K) \cdot C_1}$$

$$G_v(\max) = 47 \text{ dB}, f_{CL} = 48.2 \text{ Hz}$$

$$R_1 = 0, C_1 = 2.2 \mu\text{F}$$

Assuming $G_v = 37 \text{ dB}$, $f_{CL} = 15.1 \text{ Hz}$, for instance, the constants take the following values.

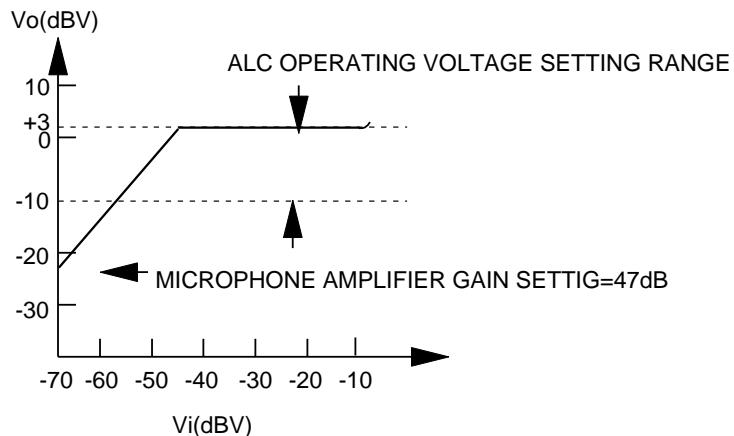

$$R_1 = 3.3K, C_1 = 2.2 \mu\text{F}$$

M65856SP

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

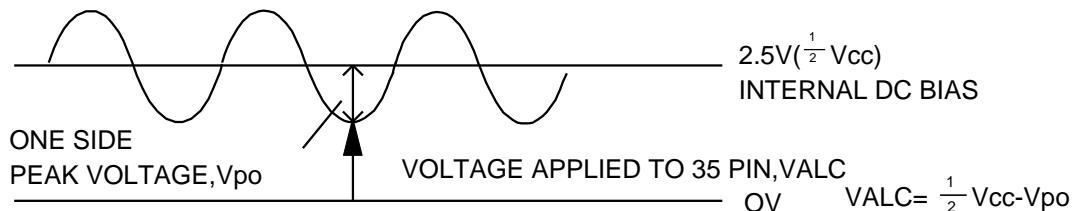

(5) ALC level diagram

(6) ALC operating voltage setting

ALC operating voltage can be set at a desired value between -10dBV and +3dBV by varying the DC voltage applied to pin ③ (ALC operating voltage setting terminal).

(Setting method)

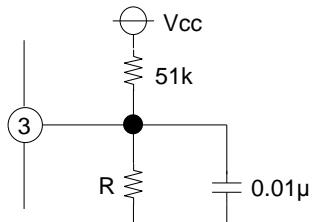

To set ALC operating voltage at -5dB ($V_{cc}=5V$)

$$-5dBV = 0.56V_{rms} = 1.59V_{p-p} = 0.8V_{p-o}$$

$$VALC = 2.5 - 0.8 = 1.7V$$

Since the input impedance at pin ⑤ ⑩ is high at 1M or more, it is possible to provide ALC operating voltage by dividing resistance.

When $V_{cc}=5V$

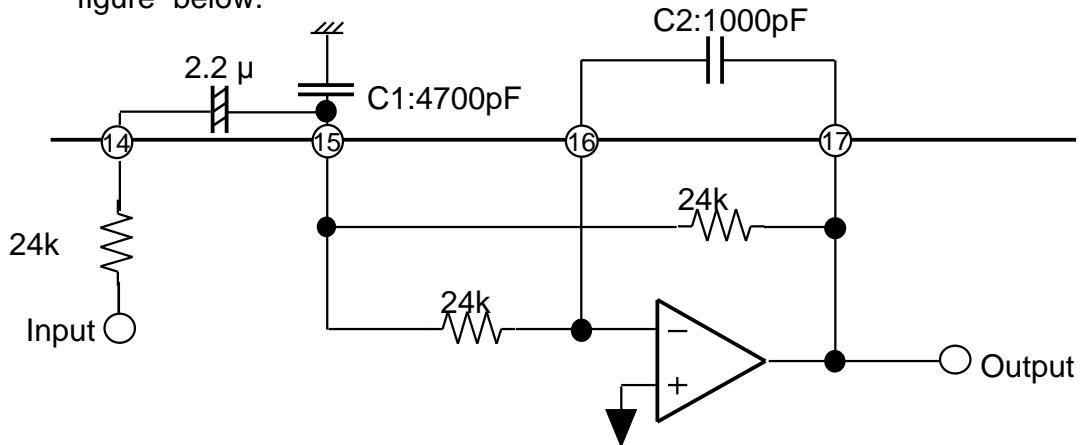

ALC operating voltage (dBV)	Voltage applied to pin ⑤ ⑩ VALC(V)	Resistance R()
+3	0.50	5.6k
0	1.09	15k
-2	1.38	20k
-4	1.61	24k
-6	1.79	27k
-8	1.94	33k
-10	2.05	36k

M65856SP

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

(7) Input and output LPF for the digital echo

The input and output LPF for the digital echo are configured as shown. figure below.

The accuracy of the internal resistance of the IC is approximately $\pm 30\%$

Cut-off frequency(f_c) is given as follows.

$$f_c = \frac{1}{2 \times 24k \times \sqrt{C_1 \times C_2}} = \frac{1}{2 \times 24k \times \sqrt{4700\text{pF} \times 1000\text{pF}}} \approx 3.1\text{KHz}$$

Quality factor (Q) is given by the following equation for long echo.

$$Q = \frac{1}{3N} \sqrt{\frac{C_1}{C_2}} \approx 0.72 \quad (\text{Figure of } 0.7 \text{ is recommended})$$

M65856SP

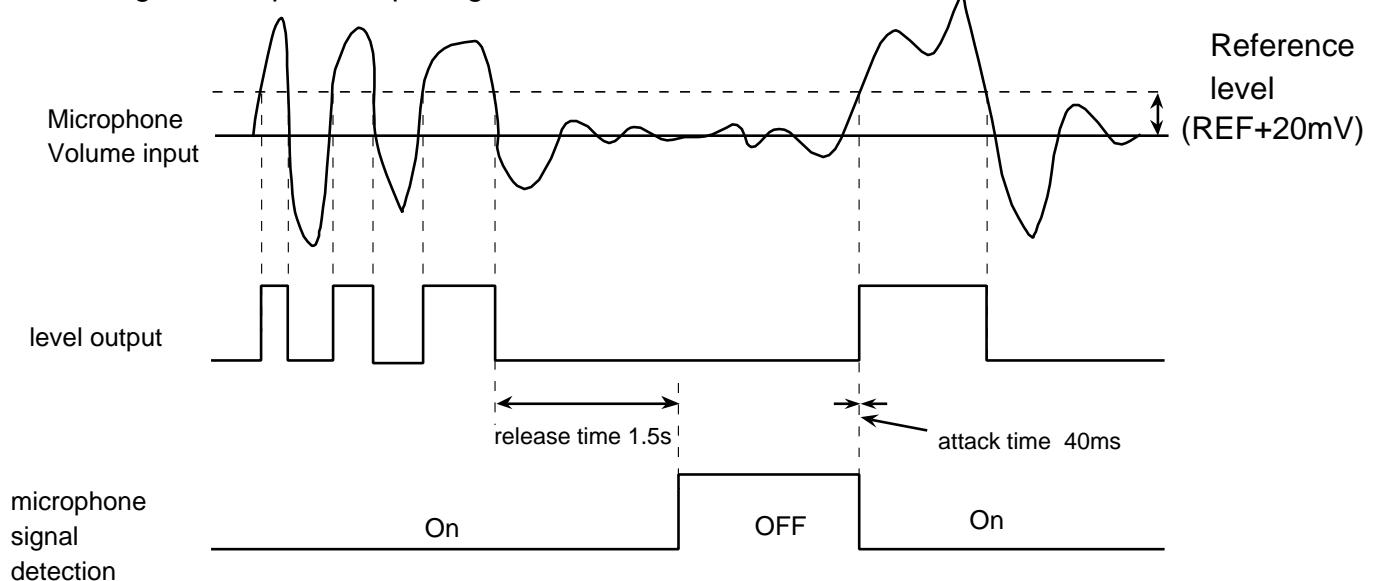

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

(8) Auto vocal support

If you can not continue sing a song, the reference vocal from the source will support you automatically.

Signal Detection		Source selector mode	
On	Lch monaural	vocal cut	Stereo Rch monaural (L+R)/2
Off	(L+R)/2	(L+R)/2	same as above

The timing of microphone input signal detection

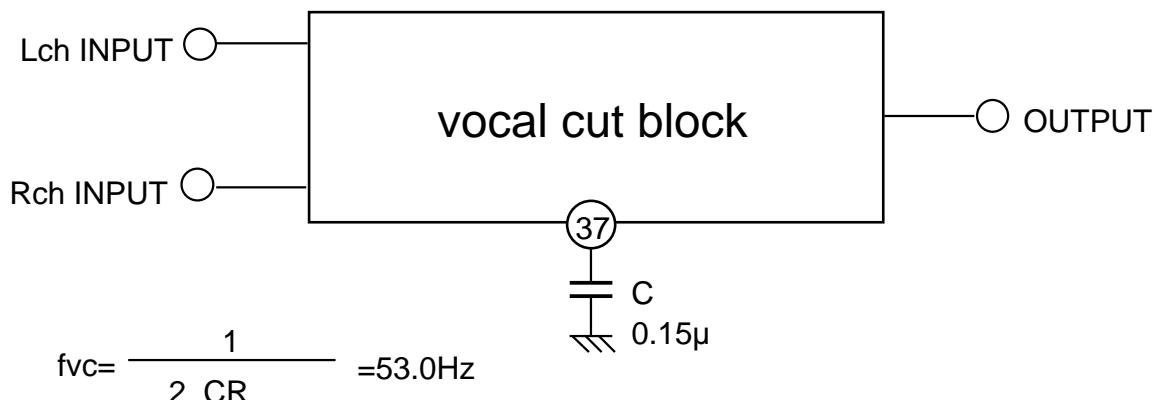

M65856SP

DIGITAL ECHO WITH MICROPHONE MIXING CIRCUIT

(9) Vocal cut support

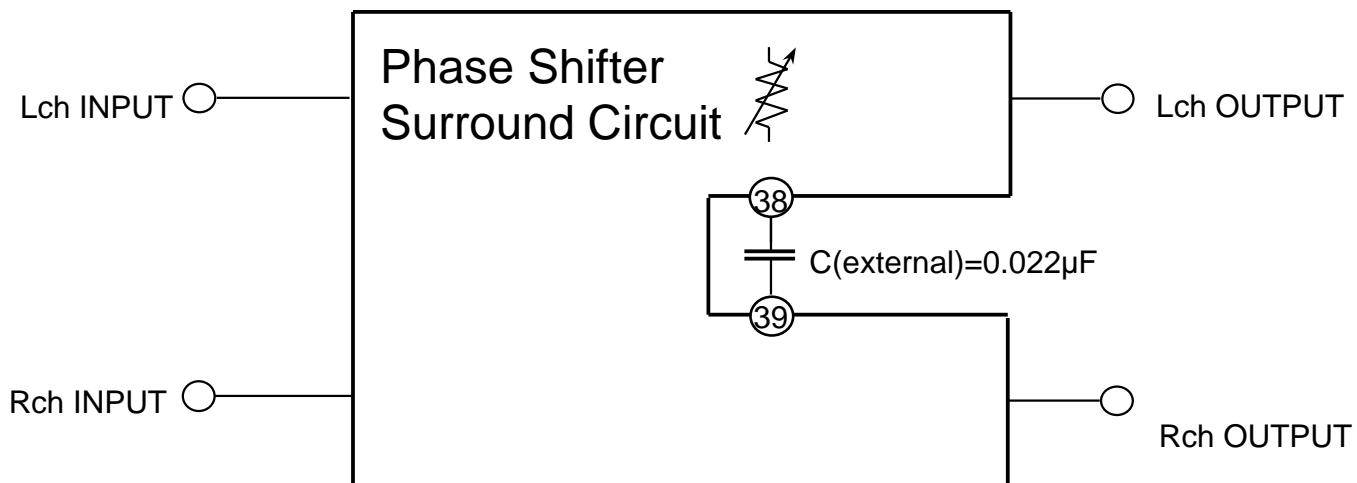

The sound components of the same phase and same sound volume in the L and R channels are attenuated.

This made also allows components with lower frequency than the vocal band to pass through the filter, to compensate insufficient low-frequency sound.

LPF is formed by the internal R (20k) and the external C, where C=0.15μF , cut off frequency is 53Hz.

(10) Following is the phase shifter block, which makes phase surround effect.

Source selector	Surround
L	
R	
(L+R)/2	Simulated Stereo
Vocal cut	
Stereo	Stereo Surround
