

STR91X-SK/IAR, STR7xx-SK/IAR

IAR's complete, low cost starter kits for STR7 and STR9

Data Brief

The **KickStart Kits™** (STR711-SK/IAR, STR712-SK/IAR, STR730-SK/IAR, STR731-SK/IAR, STR750-SK/IAR and STR91X-SK/IAR) are IAR's complete, cost-effective solutions for starting application development and evaluating a full range of STMicroelectronics' ARM® core-based microcontrollers.

They come with all the hardware and software you need to start developing applications for a full range of STMicroelectronics' ARM7TDMI™ and ARM966E™ core-based microcontrollers. The kits include the KickStart Development Board with target microcontroller, the IAR *JLink* USB-to-JTAG debugger and *IAR Embedded Workbench® for ARM (EWARM)* integrated development environment with the 32KB KickStart version of the C/C++ compiler, built in Flash loader and sample projects for all device peripherals.

Starter kit architecture

JLink– USB-to-JTAG in-circuit debugger/programmer integrates fully with EWARM, allowing you to download the application to your target and debug it while it runs on your ST ARM core-based microcontroller.

KickStart development board– evaluation board that provides a full range of features (I/Os, ADC, UART, SPI, I²C, USB...) to help you evaluate and start developing applications for the included microcontroller. The board is powered from the *JLink's* USB connection with the host PC.

IAR development software– a suite of software tools for all phases of application development that includes:

IAR Embedded Workbench for ARM integrated development environment with the *KickStart* 32KB C/C++ compiler to build the application and the *C-SPY™* debugger for debugging the application while it runs on your microcontroller.

VisualSTATE® 20-state version of IAR's graphical design environment with C/C++ code generator for developing application code based on machine states.

Starter kit key features

JLink:

- Supplies power from USB connection via pin 19 of the JTAG connector (*no additional power supply required*).
- Download speed up to 50KB/sec
- Maximum JTAG speed 8MHz
- Auto speed recognition
- 20-pin standard JTAG connector
- USB and 20-pin flat cable included
- Level shifter for 3.3V to 5V conversion (STR73X-SK/IAR, STR750-SK/IAR, STR91X-SK/IAR)
- Supported platforms: Microsoft® Windows® 2000 and XP

KickStart development board:

The KickStart development boards are available for STR711F, STR712F, STR730F, STR731F and STR91xF microcontrollers. Key features for these boards are summarized in [Table 1](#):

Software CD with:**IAR Embedded Workbench for ARM**

- KickStart 32KB C/C++ compiler
- C-SPY debugger
- Complete integration with *JLink-KS*
- Editor, linker and librarian tools
- Built-in Flash programming

visualSTATE

- Powerful code generator creates C/C++ that is absolutely consistent with the system design
- 20-state version included
- Automatic generation of design documentation
- Advanced verification and validation tools

Additional support files

- Sample projects for STR7 and STR9 peripherals, including ADC, CAN, I2C, SPI, UART, USB, Ethernet and more...
- Standard libraries for STR71xF, STR73xF, STR75xF, STR91xF, USB library for STR711F and Ethernet library for STR912F
- Quick start guide and tutorial

Ordering information

IAR KickStart kits can be ordered from IAR or from your nearest ST Distributor or sales office. Kits are currently available for the STR711F (ST order code: **STR711-SK/IAR**), STR712F (ST order code: **STR712-SK/IAR**), STR73xF (ST order code: **STR730-SK/IAR**), STR731F (ST order code: **STR731-SK/IAR**), STR75xF (ST order code: **STR750-SK/IAR**) and STR91xF (ST order code: **STR91X-SK/IAR**) microcontrollers.
