

Product List

APU8051, 25 MHz 4KB internal ROM MCU
APU8052, 25 MHz 8KB internal ROM MCU

Description

The APU8051/8052 series product is an 8 - bit single chip microcontroller with 4/8 KB ROM and 128/256 bytes RAM embedded.

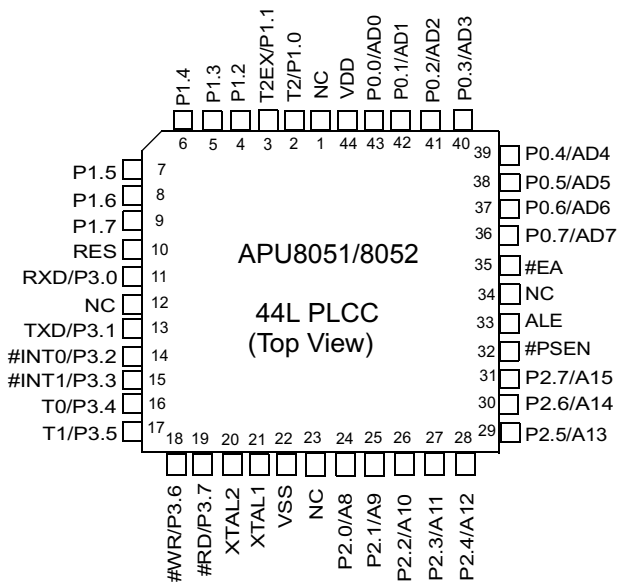

It provides hardware features and a powerful instruction set, necessary to make it a versatile and cost effective controller for those applications demand up to 32 I/O pins or need up to 64 KB external memory either for program or for data or mixed.

A serial input / output port is provided for I/O expansion, inter-processor communications, and full duplex UART.

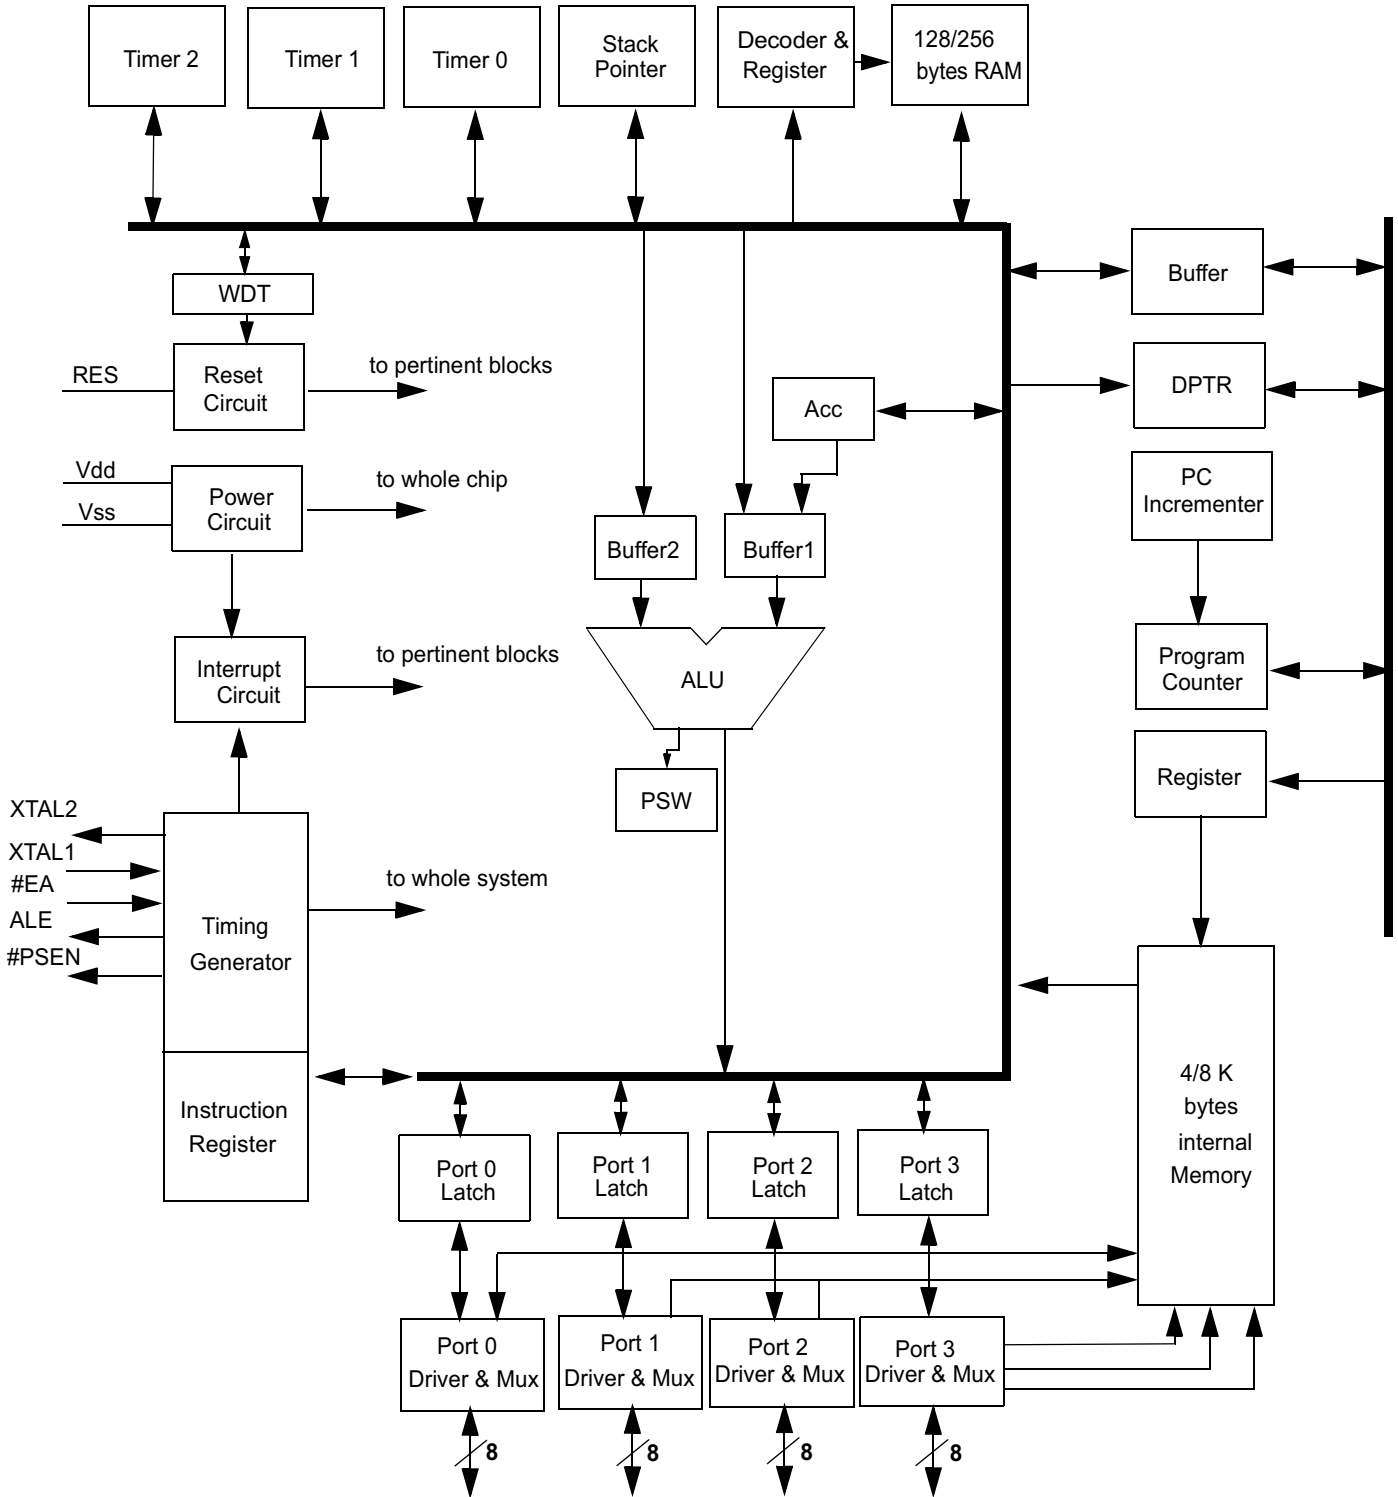

Features

- Working voltage:4.5V through 5.5V
- 12 clocks per machine cycle
- 64K byte external memory space
- 4/8 KB internal program memory
- 128/256 bytes data RAM
- 2/3 16 bit timers/counters
- Four 8-bit I/O ports
- Full duplex serial channel
- Bit operation instruction
- Page free jumps
- 8-bit unsigned division
- 8-bit unsigned multiply
- BCD arithmetic
- Direct addressing
- Indirect addressing
- Nested interrupt
- Two priority level interrupt
- A serial I/O port
- Power save modes:
Idle mode and power down mode
- Working at 25 MHz clock
- One watch dog timer (WDT)
- Low EMI (inhibit ALE)

Ping Configuration : □

Note: The text of SFRs with bold type characters are Extension Special Function Registers for APU8051/8052

Extension Function Description

Watch Dog Timer

The Watch Dog Timer (WDT) is a 16-bit free-running counter that generate a reset signal if the counter overflows. The WDT is useful for systems which are susceptible to noise, power glitches, or electronics discharge which causing software dead loop or runaway. The WDT function can help user software recover from abnormal software condition. The WDT is different from Timer0, Timer1 and Timer2 of general 80C52. To prevent a WDT reset can be done by software periodically clearing the WDT counter.

The **APU8051/8052** WDT has selectable divider input for the time base source clock. To select the divider input, the setting of bit2~bit0 (PS2~PS0) of Watch Dog Timer Control Register (WDTC) should be set accordingly.

To enable the WDT is done by setting 1 to the bit 7 (WDTE) of WDT. After WDTE set to 1, The 16-bit counter starts to count with the selected time base source clock which set by PS2 ~ PS0. It will generate a reset signal when overflows. The WDTE bit will be cleared to 0 automatically when **APU8051/8052** been reset, either hardware rest or WDT reset.

To reset the WDT is done by setting 1 to the bit 5 (CLEAR) of WDT. This will clear the content of the 16-bit counter and let the counter re-start to count from the beginning.

Watch Dog Timer Registers - WDT Control Register (WDTC, \$9F)

Reset value	WDTE	0	CLEAR	0	0	PS2	PS1	PS0
	0	0	0	0	0	0	0	0
	MSB				LSB			

WDTE : Watch Dog Timer enable bit

CLEAR : Watch Dog Timer reset bit

PS2 ~ PS0 : clock source divider bit

PS [2:0]	Divider (OSC in)	Time Period (ms) @40MHZ
000	8	13.1
001	16	26.21
010	32	52.42
011	64	104.8
100	128	209.71
101	256	419.43
110	512	838.86
111	1024	1677.72

Watch Dog Timer Register - System Control Register (SCONF, \$BF)

Reset value	WDR	R	R	R	R	R	R	ALEI
	0	0	0	0	0	0	0	0
	MSB				LSB			

WDR : Watch Dog Timer Reset. When system reset by Watch Dog Timer overflow, WDR will be set to 1

ALEI : ALE output inhibit bit, to reduce EMI

The bit 7(WDR) of SCONF is Watch Dog Timer Reset bit. It will be set to 1 when reset signal generated by WDT overflow. User should check WDR bit whenever unpredicted reset happened.

Reduce EMI Function

The **APU8051/8052** allows user to reduce the EMI emission by setting 1 to the bit 0 (ALEI) of SCONF register. This function will inhibit the clock signal in Fosc/6Hz output to the ALE pin. This function is available when there is no external program memory or no external data RAM in the system.

NOTE: Oscillation circuit may differs with different crystal or ceramic resonator in higher oscillation frequency which was due to each crystal or ceramic resonator has its own characteristics. User should check with the crystal or ceramic resonator manufacturer for appropriate value of external components.

40L 600mil PDIP Information

Note:

1. Dimension D Max & include mold flash or tie bar burrs.
2. Dimension E1 does not include interlead flash.
3. Dimension D & E1 include mold mismatch and are determined at the mold parting line.
4. Dimension B1 does not include dambar protrusion/infusion.
5. Controlling dimension is inch.
6. General appearance spec. should base on final visual inspection spec.

Symbol	Dimension in inch	Dimension in mm
	minimal/maximal	minimal/maximal

44L Plastic Quad Flat Package

Note:

Dimension D1 and E1 do not include mold protrusion.
 Allowance protrusion is 0.25mm per side.
 Dimension D1 and E1 do include mold mismatch and are determined datum plane.
 Dimension b does not include dambar protrusion.
 Allowance dambar protrusion shall be 0.08 mm total in excess of the b dimension at maximum material condition. Dambar cannot be located on the lower radius or the lead foot.
