TOSHIBA CMOS Digital Integrated Circuit Silicon Monolithic

TC74VCXHR162543FT

Low-Voltage 16-Bit Registered Transceiver with Bushold

The TC74VCXHR162543FT is a high-performance CMOS 16-bit registered transceiver. Designed for use in 1.8-V, 2.5-V or 3.3-V systems, it achieves high-speed operation while maintaining the CMOS low power dissipation.

The TC74VCXHR162543FT can be used as two 8-bit transceivers or one 16-bit transceiver. Separate latch-enable ($\overline{\text{LEAB}}$ or $\overline{\text{LEBA}}$) and output-enable ($\overline{\text{OEAB}}$ or $\overline{\text{OEBA}}$) inputs are provided for each register to permit independent control in either direction of data flow.

The A-to-B enable (\overline{CEAB}) input must be low in order to enter data from A or to output data from B. If \overline{CEAB} is low and \overline{LEAB} is low, the A-to-B latches are transparent; a subsequent

Weight: 0.25 g (typ.)

low-to-high transition of $\overline{\text{LEAB}}$ puts the Alatches in the storage mode. With $\overline{\text{CEAB}}$ and $\overline{\text{OEAB}}$ both low, the 3-state B outputs are active and reflect the data present at the output of the A latches.

Data flow from B to A is similar but requires using the $\overline{\text{CEBA}}$, $\overline{\text{LEBA}}$, and $\overline{\text{OEBA}}$ inputs.

When the \overline{OE} input is high, the outputs are in a high-impedance state. This device is designed to be used with 3-state memory address drivers, etc.

The 26- Ω series resistor helps reducing output overshoot and undershoot without external resistor.

The A, B data inputs include active bushold circuitry, eliminating the need for external pull-up resistors to hold unused or floating data inputs at a valid logic level.

All inputs are equipped with protection circuits against static discharge.

Features (Note)

- $26-\Omega$ series resistors on outputs
- Low-voltage operation: V_{CC} = 1.8 to 3.6 V
- Bushold on data inputs eliminating the need for external pull-up/pull-down resistors
- High-speed operation: $t_{pd} = 4.4 \text{ ns} (\text{max}) (V_{CC} = 3.0 \text{ to } 3.6 \text{ V})$

$$t_{pd} = 5.4 \text{ ns} (\text{max}) (\text{V}_{\text{CC}} = 2.3 \text{ to } 2.7 \text{ V})$$

$$: t_{pd} = 9.8 \text{ ns} (max) (V_{CC} = 1.8 \text{ V})$$

- 3.6-V tolerant control inputs
- Output current: $I_{OH}/I_{OL} = \pm 12 \text{ mA} \text{ (min)} (V_{CC} = 3.0 \text{ V})$

$$IOH/IOL = \pm 8 \text{ mA} \text{ (min)} (VCC = 2.3 \text{ V})$$

- $: I_{OH}/I_{OL} = \pm 4 \text{ mA (min)} (V_{CC} = 1.8 \text{ V})$
- Latch-up performance: -300 mA
- ESD performance: Machine model $\geq \pm 200 \text{ V}$

Human body model $\geq \pm 2000 \text{ V}$

• Package: TSSOP

Note: Do not apply a signal to any bus pins when it is in the output mode. Damage may result.

Absolute Maximum Ratings (Note 1)

	Characteristics	Symbol	Rating	Unit
Power sup	oply voltage	V _{CC}	-0.5 to 4.6	V
DC input			-0.5 to 4.6	
voltage	(An Rn)	V _{IN}	-0.5 to V _{CC} + 0.5	V
(An, Bn)			(Note 2)	
DC			-0.5 to V _{CC} + 0.5	
output (An, Bn) voltage		Vout	(Note 3)	V
Input diode current		I _{IK}	-50	mA
Output diode current		IOK	±50 (Note 4)	mA
Output current		IOUT	±50	mA
Power dissipation		PD	400	mW
DC V _{CC} /ground current per supply pin		I _{CC} /I _{GND}	±100	mA
Storage te	emperature	T _{stg}	–65 to 150	°C

Note 1: Exceeding any of the absolute maximum ratings, even briefly, lead to deterioration in IC performance or even destruction.

Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.

Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook ("Handling Precautions"/"Derating Concept and Methods") and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

- Note 2: OFF state
- Note 3: High or low state. I_{OUT} absolute maximum rating must be observed.

Note 4: $V_{OUT} < GND, V_{OUT} > V_{CC}$

Operating Ranges (Note 1) (Note 2)

Characteristics		Symbol	Rating	Unit	
Power su	oply voltage	Vcc	1.8 to 3.6	V	
Fower su	opiy voltage	VCC	1.2 to 3.6 (Note 3)	v	
Input voltage (<u>OEAB</u> , <u>OEBA</u> , <u>LEAB</u> , LEBA, <u>CEAB</u> , <u>CEBA</u>) (An, Bn)		VIN	-0.3 to 3.6	V	
			0 to V _{CC} (Note 4)		
Output voltage (An, Bn)		V _{OUT}	0 to V_{CC} (Note 5)	V	
			±12 (Note 6)		
Output current		I _{OH} /I _{OL}	±8 (Note 7)	mA	
			±4 (Note 8)		
Operating temperature		T _{opr}	-40 to 85	°C	
Input rise	and fall time	dt/dv	0 to 10 (Note 9)	ns/V	

Note 1: The operating ranges must be maintained to ensure the normal operation of the device. Unused inputs must be tied to either VCC or GND.

Note 2: Floating or unused control inputs must be held high or low.

Note 3: Data retention only

- Note 4: OFF state
- Note 5: High or low state
- Note 6: $V_{CC} = 3.0$ to 3.6 V
- Note 7: $V_{CC} = 2.3$ to 2.7 V
- Note 8: V_{CC} = 1.8 V
- Note 9: $V_{IN} = 0.8$ to 2.0 V, $V_{CC} = 3.0$ V

Note: Parameter guaranteed by design.

Capacitive Characteristics (Ta = 25°C)

Characteristics	Symbol	Test Condition		Тур.	Unit
Characteristics	Symbol		V _{CC} (V)	ryp.	Onit
Input capacitance	C _{IN}	(<u>OEAB</u> , OEBA, LEAB, LEBA, CEAB, CEBA)	1.8, 2.5, 3.3	6	pF
Bus I/O capacitance	C _{I/O}	_	1.8, 2.5, 3.3	7	pF
Power dissipation capacitance	C _{PD}	$f_{IN} = 10 \text{ MHz} \tag{Note}$	1.8, 2.5, 3.3	20	pF

Note: C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation:

 $I_{CC (opr)} = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC}/16$ (per bit)

RESTRICTIONS ON PRODUCT USE

20070701-EN GENERAL

- The information contained herein is subject to change without notice.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
 In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc.
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.).These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in his document shall be made at the customer's own risk.
- The products described in this document shall not be used or embedded to any downstream products of which manufacture, use and/or sale are prohibited under any applicable laws and regulations.
- The information contained herein is presented only as a guide for the applications of our products. No
 responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which
 may result from its use. No license is granted by implication or otherwise under any patents or other rights of
 TOSHIBA or the third parties.
- Please contact your sales representative for product-by-product details in this document regarding RoHS compatibility. Please use these products in this document in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances. Toshiba assumes no liability for damage or losses occurring as a result of noncompliance with applicable laws and regulations.
