

# Integrated circuit of temperature sensor

**KK135Z**

Microcircuit KK135Z is precision temperature sensor with calibration capacity. Microcircuit operates as Zener diode with breakdown voltage being in direct proportion to absolute temperature ( $10 \text{ mV}/\text{K}$ ). Full dynamic resistance of the circuit is less than 1 Ohm at operation current  $450 \mu\text{A}...5 \text{ mA}$ . The sensor calibrated at the temperature  $25^\circ\text{C}$ , has typical error less than  $1^\circ\text{C}$  in the temperature range above  $100^\circ\text{C}$ . The peculiarity of the circuit KK135Z is the linear dependence of output voltage versus temperature.

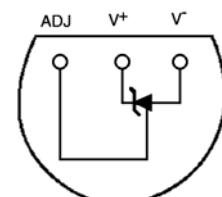

## IC features

- calibration in  $0^\circ\text{K}$
- initial measurement accuracy  $1^\circ\text{K}$
- range of operating supply current from  $450 \mu\text{A}$  to  $5 \text{ mA}$
- Full dynamic resistance less than 1 Ohm

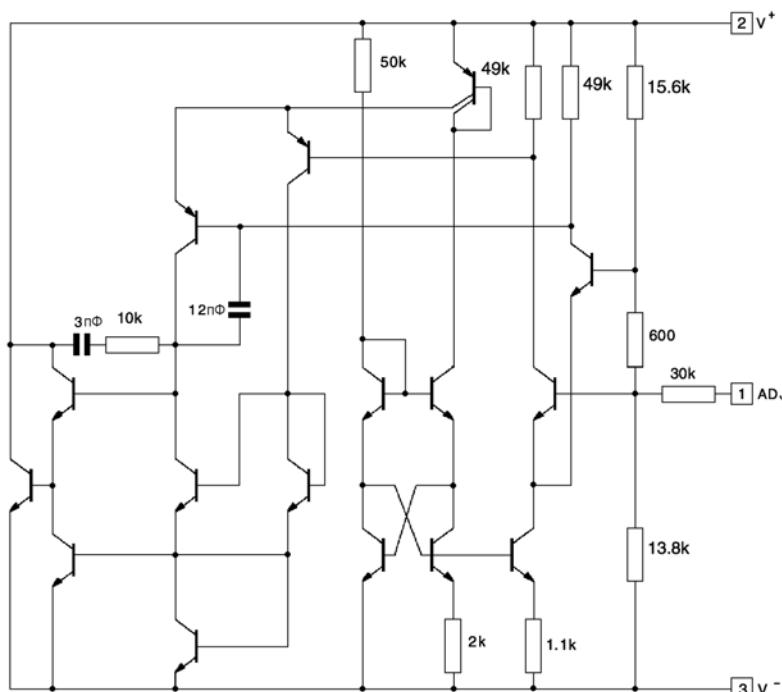

Packaged IC type:

KK135Z, KT-26

**Table 1 - Maximum ratings**

Name of parameter	Symbol	Standard		Unit of measurement
		min	max	
IC current reverse direct	$I_R$ $I_F$	- --	15 10	mA
<b>Air operation temperature: *</b> - constant mode - short-time	$T_{OPER}$	-55 150	150 200	°C
Storage temperature	$T_{STG}$	-65	150	°C

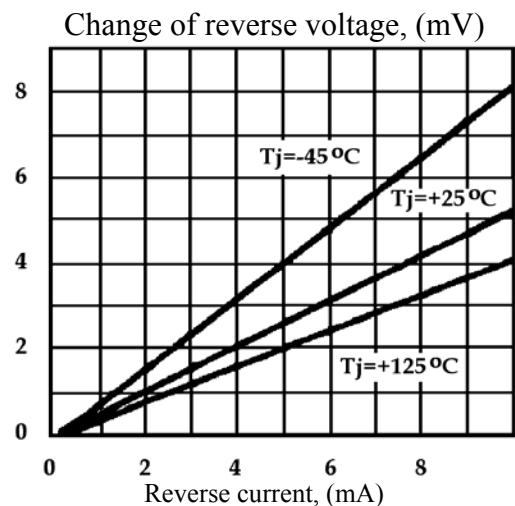

Note - \* $T_J \leq 150^\circ\text{C}$ 
**Table 2 – Temperature parameters.**

Name of parameter	Symbol	Standard			Test conditions	Temperature °C	Unit
		min	Type	max			
output voltage, V	$U_{OUT}$	2,95	2,98	3,01	$I_R = 1 \text{ mA}$	25	V
Non-calibrated temperature error	$\Delta T_1$	-	1 2	3 5	$I_R = 1 \text{ mA}$	25 -55 $\div$ 150	°C
temperature error at calibration 25°C	$\Delta T_2$	-	0,5	1,5	$I_R = 1 \text{ mA}$	-55 $\div$ 150	°C
Calibrated error in extended temperature range	$\Delta T_3$	-	2	-	$T_{case} = T_{max}$ periodical	-55 $\div$ 150	°C
Non-linearity of temperature characteristic	$\Delta T_4$	-	0,3	1	$I_R = 1 \text{ mA}$	-55 $\div$ 150	°C

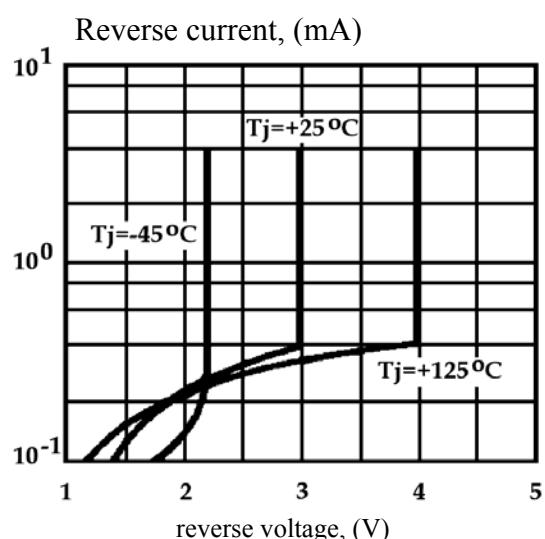

**Table 3 – Electrical parameters.**

Name of parameter	Symbol	Standard			Test conditions	Temperatu re °C	
		min	type.	max			
Measurement of output voltage in supply currents range	$\Delta U_{OUT}$	-	2,5	10	$0,45 \text{ mA} \leq I_R \leq 5 \text{ mA}$	-55 $\div$ 150	mV
Dynamic impedance	$\Delta R_1$	-	0,5	-	$I_R = 1 \text{ mA}$	25	Ohm
Temperature coefficient of output voltage	TKH	-	+10	-	-	25	mV/°C
Time constant: -still air -speed of air is 0,5 m/c - agitated oil	$\tau_T$	- - -	80 10 1	- - -	-	-55 $\div$ 150	C
Time stability	$T_{CTAB}$	-	0,2	-	-	125	°C/ 1000Ч

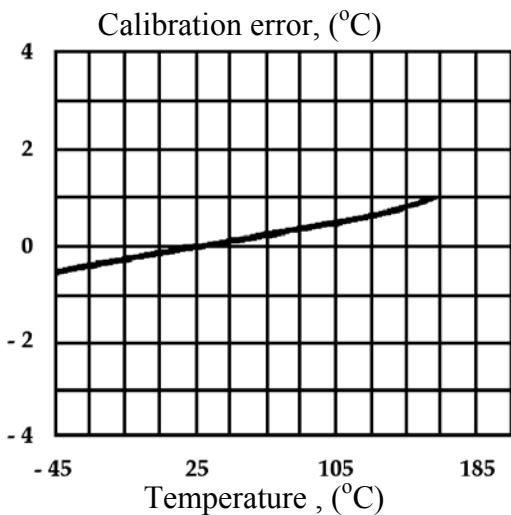

Note – Precise measurements done in agitated oil bath. For other conditions there should be taking into consideration self-heating .

### Information for application.

There is a simple technique of the device calibration for improving precision of temperature measurement (see typical application circuits).

Calibration of the device occurs in one spot as the IC output voltage is proportional to absolute temperature with sensor voltage extrapolation to 0 V at 0°K (-273,15°C). The errors in dependence of output voltage on temperature are determined only by characteristic incline. Therefore bias calibration at one temperature corrects errors in the whole temperature range. Output voltage of calibrated or non calibrated circuit may be derived from the following equation:

$$V_{OT} = V_{OT0} \frac{T}{T_0};$$

where T – unknown temperature;

T<sub>0</sub> – reference temperature (in °K).

Nominally IC output calibrated to the value 10 mV/°K.

To ensure measurement precision they apply some rules. Degradation of the precision when self-heating is proper to any devices of temperature sensors. The circuit should operate at low operating current but sufficient for controlling the sensor and its calibration circuit at maximum operating temperature.

When using the sensor in the field with constant thermal resistance, error when self-heating may be reduced by external calibration. It can be done at the circuit bias when applying temperature-stabilized current. Thus heating will be proportional to Zener diode voltage. In this case error when self-heating is proportional to absolute temperature as the error of scaling coefficient.

### Typical application circuits.
