

HOA1160

Reflective Sensor

FEATURES

- Choice of phototransistor or photodarlington output
- Focused for maximum response
- Wide operating temperature range (-55°C to +100°C)
- Low profile to facilitate stacking

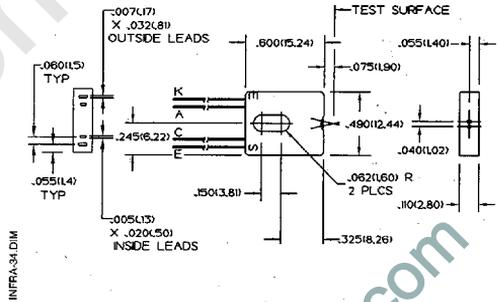

DESCRIPTION

This compact reflective sensor consists of an infrared emitting diode and an NPN silicon phototransistor (HOA1160-001, -002) or photodarlington (HOA1160-003), encased side-by-side on converging optical axes, in a black thermoplastic housing. The detector responds to radiation from the IRED only when a reflective object passes within its field of view. Flexibility of use is enhanced by a mounting arrangement which allows an adjustment of 0.15 in. (3.80 mm) in the distance from the reflective surface. The HOA1160 series employs hermetically sealed, metal can packaged components. For additional component information see SE2460, SD2440, and SD2410.

Housing material is acetal copolymer. Housings are soluble in chlorinated hydrocarbons and ketones. Recommended cleaning agents are methanol and isopropanol.
