

Contactless Potentiometer

FP 310 L 100

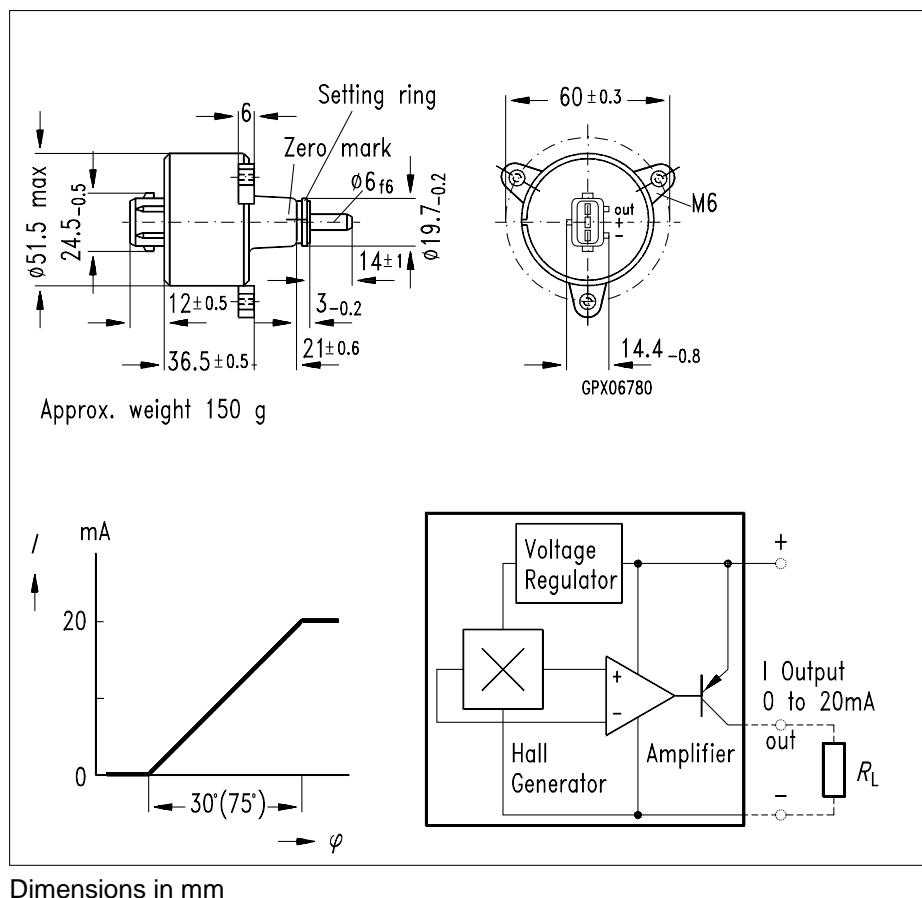

Version 2.0

Features

- Devoid of friction and abrasion at contact point
- No electrical contact noise
- Insensitive to contamination, moisture ingress, corrosion and vibration
- Low operating torque
- Long lifetime

Typical Applications

- Angular encoder
- Electric vehicles

Type	Ordering Code
FP 310 L 100-30	Q65310-L100-U30
FP 310 L 100-75	Q65310-L100-U75

The contactless potentiometer comprises a GaAs Hall effect sensor actuated by two permanent magnets which are mounted on the end of the potentiometer spindle. The device is complete with supply voltage stabilisation and series connected output amplifier. Two measuring ranges are offered, $0 \dots 30^\circ$ and $0 \dots 75^\circ$, and the output is given as a current of $0 \dots 20$ mA linearly proportional to the angle of rotation. Temperature compensation circuitry is also included.

Absolute Maximum Ratings

Parameter	Symbol	Limit Values	Unit
Operating temperature	T_A	– 25 / + 70	°C
Supply voltage	V_{IN}	15	V
Supply current	I_{IN}	75	mA
