

BIPOLAR ANALOG INTEGRATED CIRCUIT

μ PC1356C2

COMPLETE PICTURE IF IC FOR COLOR TV
SILICON BIPOLAR MONOLITHIC INTEGRATED CIRCUIT

The μ PC1356C2 is a silicon monolithic integrated circuit for PIF section in Color Television receivers. As it contains picture detector and sound IF detector separately, it can offer excellent low buzz characteristics. This IC has all functions including picture IF amplifier (4th), picture low-level detector, sound IF detector, AFC detector, IF AGC, RF AGC and picture amplifier.

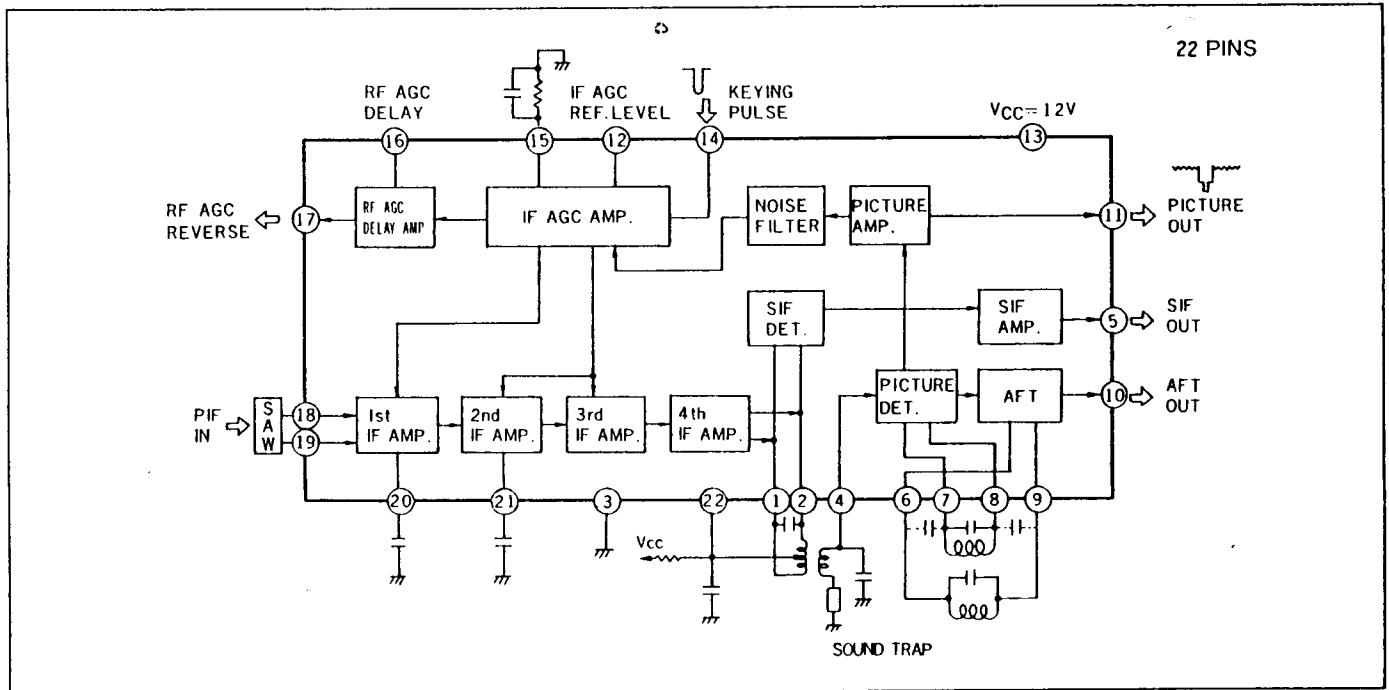

FEATURES

- As it contains picture detector and sound IF detector separately, it can offer excellent low buzz characteristics for Audio Multiplex TV.
- High input sensitivity; TYP. 32 dB μ
- The AGC control range is wide; TYP. 70 dB
- As input is differential mode, it can be used with SAW filter.

PACKAGE DIMENSIONS (Unit: mm)
