

T-49-13-02

UM3150

PRELIMINARY

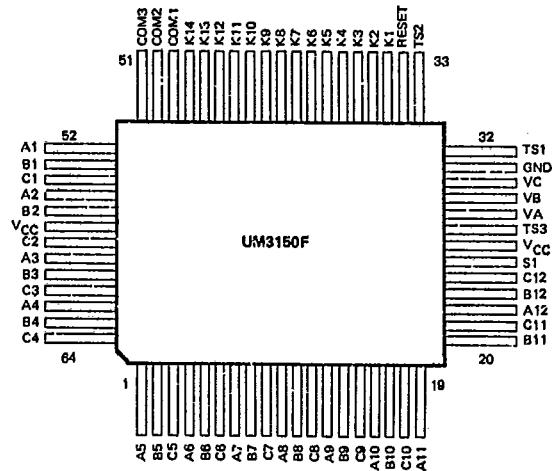

10/12-Digit Calculator**Features**

- Display: 10 or 12 digits (pin-programmable) with sign, error and memory load symbols
- Standard four functions (+, -, ×, ÷)
- Change sign function
- Chain calculation
- Constant calculation
- Square and reciprocal calculations
- Automatic percentage operation with add-on, discount
- Automatic delta percentage, mark-up and mark-down operations
- Square root
- Floating point or momentary mode
- Fixed point ("0", "1", "2", "3", "4" or "6" format) or floating point (switch selectable)
- Add point mode (switch selectable)
- Rounding switches (rounding up, down and off)
- Leading zero and trailing zero suppression
- Punctuation for display, commas for thousands
- Memory and grand total (GT) calculations
- Accumulating GT memory register with count up (down) item counter
- Memory and GT memory contents Indicator, turned on with non-zero in the memory or GT memory
- Registration overflow indicating. (too many digits entered)
- Result overflow indicating
- Memory overflow indicating (with flashing)
- Direct driving of LCD
- Built-in RC oscillator
- Auto-power-off function
- Available in quad in-line flat package (64 pin) or chip form

General Description

The UM3150 is a single-chip CMOS calculator LSI with 10/12 digit capacity, two memories. Keyboard encoding and debouncing are internal to chip. It is designed for LCD operation with a 1.5V power supply. Single power

supply operation, wide operating voltage range and low power consumption make it suitable for battery or solar battery operated calculators.

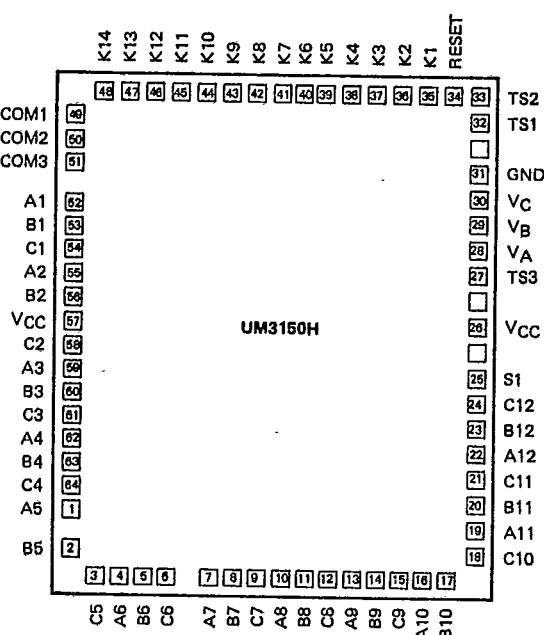

Pin Configuration

Absolute Maximum Ratings *

Terminal Voltage, V_{DD} $-0.3 \sim +2.3V^*$
 Terminal Voltage, V_{IN} : $-0.3 \sim V_{DD} + 0.3V$
 Operating Temperature: T_{opr} $0 \sim +50^\circ C$
 Storage Temperature: T_{stg} (Chip Form) ... $-40 \sim +90^\circ C$
 Storage Temperature: T_{stg} (Package Form) ... $-55 \sim +125^\circ C$

*Maximum voltage on any pin with respect to GND.

***Comments**

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.

D.C. Electrical Characteristics ($V_{DD} = 1.5V$, $T_A = 25^\circ C$, unless otherwise specified)

Symbol	Parameter	Min.	Typ.	Max.	Unit	Test Condition	Note
V_{DD}	Supply Voltage	1.2	1.5	1.8	V		1
V_{IH}	Input Voltage	$V_{DD} - 0.4$		V_{DD}	V		2
$V_{IL(1)}$		0		0.4	V		3
$V_{IL(2)}$		V_{EE}		$V_{EE} + 0.4$	V		4
$I_{IH(1)}$	Input Current		5	10	μA		5
$I_{IH(2)}$		1	2	3	μA		4
I_{IL}		1.9	2.5	3.8	μA		6
V_{OH}	Output Voltage	$V_{DD} - 0.2$		V_{DD}	V		7
V_{EE}			-1.5	-1.2	V		8
$V_{OL(1)}$		0		0.2	V		9
$V_{OL(2)}$		V_{EE}		$V_{EE} + 0.2$	V		10
I_{OH}	Output Current			70	k Ω	$V_O = V_{EE} + 0.5V$	10
I_{OL}				70	k Ω	$V_O = V_{DD} - 0.5V$	10
I_{WAIT}	Supply Current		2	3.5	μA		11
I_{OPR}			7	11	μA		12
I_{OFF}				1	μA		13

A.C. Characteristics ($V_{DD} = 1.5V$, $T_A = 25^\circ C$, unless otherwise specified)

Symbol	Parameter	Min.	Typ.	Max.	Unit	Test Condition	Note
Fwait	Oscillator Frequency	12	20	26	kHz		
Fopr.		60	100	130	kHz		
Fdisp.	Display Frequency	59	94	130	Hz		10
Toff	Power Off Timer Times	450	600	800	sec		

- Notes:
- 1. Applies to terminals V_{DD} .
 - 2. Applies to terminals K1 ~ K14, RESET.
 - 3. Applies to terminals K3 ~ K10, RESET.
 - 4. Applies to terminals K11 ~ K14.
 - 5. Applies to terminal RESET.
 - 6. Applies to terminals K3 ~ K10.
 - 7. Measured by terminals K1 ~ K8, H1 ~ H3, A1 ~ C12.

- 8. Measured by terminal V_C .
- 9. Measured by terminals K1 ~ K8.
- 10. Measured by terminals H1 ~ H3, A1 ~ C12.
- 11. "0" is displayed and no key is depressed.
- 12. When depressing the "ON" key.
- 13. "OFF" key is depressed.

Functional Description**Keyboard Description****Number Key (00, 0 ~ 9,,)**

The first number key in a sequence will clear the display and enter the digit in the display. Successive entries will shift the display left and enter data in the display register. The first decimal point is effective. An attempted entry of more than 12 digits will cause a register overflow error.

Change Sign Key (\pm)

During digit entry, depressing this key will change the sign of the entered numeric.

Equal Key (=)

Performs previous operation and maintains that operation for possible use. Establishes power/reciprocation calculation.

Multiplication Key (X)

Enters multiplicand.

Performs previous operation and displays result.

Division Key (\div)

Enter dividend.

Performs previous operation and displays result.

Addition Key (+)

Performs previous operation and displays result.

Conditions machine for an addition.

Subtraction Key (-)

Performs previous operation and displays result.

Conditions machine for a subtraction.

Square Root Key ($\sqrt{}$)

The square root key extracts the square root of a positive number being displayed in the entry register.

Percent Key (%)

The purpose of the percent key is to allow for calculation of add-on and discount.

Delta Percent Key ($\Delta\%$)

Performs mark-up, mark-down operation.

Memory Plus Key (M+)

Adds the current display to the content of memory.

M+ will terminate a number entry.

Memory Minus Key (M-)

Subtracts the current display from content of memory.

M- will terminate a number entry.

Grand Total Plus Key (GT+)

Adds the current display to the content of grand total memory.

GT+ will terminate a number entry.

Grand Total Minus Key (GT-)

Subtracts the current display from the content of grand

total memory.

GT— will terminate a number entry.

Clear Memory Key (CM)

Clears the memory content.

Recall Memory Key (RM)

Transfers the content of the memory register into the display register.

Recall and Clear Memory Key (RCM)

The first push transfers the content of the grand total memory register into the display register. The second push, as CM key, clears the memory content.

Recall and Clear Memory Key (RCGT)

The first push transfers the content of the grand total memory register into the display register. The second push clears the grand total memory content.

Exchange Key (EX)

Exchanges the contents of two operands (Ex. multiplicand and multiplier)

Shift Key (\rightarrow)

Shifts the display register right and clears the least significant digit.

Item Count Key (IC)

Recalls the item number which has been input into the grand total memory.

Clear Entry Key (CE)

During digit entry, one depression will clear the entry register to zero.

Clear Entry/Clear On Key (CE/ON)

When off, pushing this key will turn on the power and display 0. During digit entry, pushing will clear the entry. Otherwise, pushing the key will clear all the operating registers.

Clear On Key (ON)

When off, pushing this key will turn on the power and display 0. When on, pushing the key will clear all the operating registers.

Off Key (OFF)

Turns off the system.

System Reset Key (AC)

Resets the system.

Clears all the registers including memories.
