50/125 Micron Multimode Duplex Patch Cords

62.5/125 was the original standard for network equipment, however, many manufacturers are turning to 50/125 for its added properties. The biggest advantage to 50/125 multimode cabling is that it has 3 times the bandwidth allowance at 850nm wavelength. Simply put, this type of cabling has more capacity to transmit information at this wavelength.
