AOB420, AOB420L

N-Channel Enhancement Mode Field Effect Transistor

General Description

The AOB420 uses advanced trench technology to provide excellent $R_{DS(ON)}$, low gate chargeand low gate resistance. This device is ideally suited for use as a high side switch in CPU core power conversion. AOB420L (Green Product) is offered in a Lead Free package.

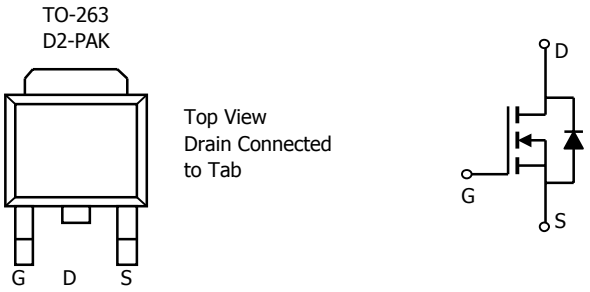
Features

V_{DS} (V) = 30V

I_D = 110A

$R_{DS(ON)}$ < 6.5mΩ (V_{GS} = 10V)

$R_{DS(ON)}$ < 10.0mΩ (V_{GS} = 4.5V)



Absolute Maximum Ratings T_A=25°C unless otherwise noted

A: The value of $R_{\theta JA}$ is measured with the device mounted on 1in^2 FR-4 board with 2oz. Copper, in a still air environment with T_A =25°C. The Power dissipation P_{DSM} is based on steady-state $R_{\theta JA}$ and the maximum allowed junction temperature of 150°C. The value in any a given application depends on the user's specific board design, and the maximum temperature fo 175°C may be used if the PCB or heatsink allows it.

B. The power dissipation P_D is based on $T_{J(MAX)}$=175°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used. It is used to determine the current rating, when this rating falls below the package limit.

C: Repetitive rating, pulse width limited by junction temperature $T_{J(MAX)}$=175°C.

D. The $R_{\theta JA}$ is the sum of the thermal impedence from junction to case $R_{\theta JC}$ and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300µs pulses, duty cycle 0.5% max.

F. These tests are performed with the device mounted on 1 in^2 FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The SOA curve provides a single pulse rating.

G. The maximum current rating is limited by the package current capability.
