

64Kx16 CMOS, High Speed Programmable, Static RAM Module

The EDI8M1665C is a 1024K-bit high speed CMOS Static RAM Module consisting of four (4) 64Kx4 Static RAMs in leadless chip carriers surface-mounted onto a multilayered ceramic substrate. Four Chip Select lines (one for each 64Kx4) allow the user to configure the memory into a 64Kx16, 128Kx8 or 256Kx4 organizations.

The EDI8M1665C is available with access times as fast as 35ns. The high density module, a 40 pin sidebraced DIP on 900 mil centers, is a pin for pin replacement for EDI's EDH816H64C module.

All inputs and outputs are TTL compatible and operate from a single 5V supply. Dual ground pins are provided for maximum noise immunity.

Fully asynchronous circuitry requires no clocks or re-freshing for operation.

EDI Military Modules are constructed using semiconductor components which are compliant to MIL-STD-883, paragraph 1.2.1.
