Pin Descriptions

Pin No.	Pin Name	DC Voltage	Equivalent Circuit	Description
1	AM RF Input	5V		<p>Configuration of RF amp is differential amp. Input of base T1 & T3 need dc bias via external coil to V_{CC}.</p> <p>Usable sensitivity is better if antenna coil is used.</p> <p>AGC operates when T1 & T2 are off, T3 & T4 are on, becoming differential amp for small signal.</p> <p>On the other hand, when T1 & T2 are on, T3 & T4 are off, becoming differential for large signal.</p>
2	AM Oscillator	5V		<p>Configuration of OSC circuit is a differential amp.</p> <p>Note that OSC stops when Q factor of external coil is low.</p> <p>To test for OSC stop, use bare hand to touch on the secondary coil pins.</p> <p>In good case, when hand is removed, OSC restarts.</p> <p>Resistor R is for the prevention of stop OSC.</p> <p>If R=0, then at V_{CC} "ON", there is no DC loading and T1 & T2 are not "ON", there will be no oscillation.</p> <p>Level at pin 2 is 120mV.</p>
3	FM IF IN	5V		<p>Input impedance decided by 500Ω internal resistor.</p> <p>Limiting amp configuration is a 5-stages differential amp.</p> <p>The total gain is 60dB.</p>
4	AM MIX OUT	5V		<p>Mixer configuration is double-balanced mixer.</p> <p>Oscillation leakage is minimized.</p>
