

GP1U26R/GP1U27R Series GP1U28R/GP1U28Q Series

Anti Electromagnetic Induction Noise Type Compact IR Detecting Unit for Remote Control

■ Features

1. Anti electromagnetic induction noise type
2. Compact (case volume)
(GP1U28Q : About 1/4 compared with GP1U78Q)
3. Power filter capacitor and resistance are not required any more as a result of adoption of built-in constant voltage circuit
4. Various B.P.F. (Band Pass Frequency) frequency to meet different user needs

■ Applications

1. AV equipment such as TV sets, VCRs and audio equipment
2. HA equipment such as air conditioners and electric fans

■ Outline Dimensions

(Unit : mm)

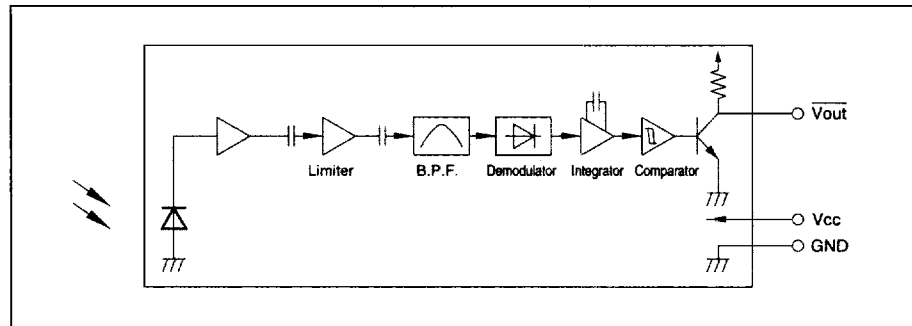

* In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest version of the device specification sheets before using any SHARP's device.

Model Line-ups

Diversified models with a different B.P.F. frequency are also available.

B.P.F. center frequency	Model No.				Unit
40	GP1U26R	GP1U27R	GP1U28R	GP1U28Q	kHz
36	GP1U260R	GP1U270R	GP1U280R	GP1U280Q	
38	GP1U261R	GP1U271R	GP1U281R	GP1U281Q	
36.7	GP1U262R	GP1U272R	GP1U282R	GP1U282Q	
32.75	GP1U263R	GP1U273R	GP1U283R	GP1U283Q	
56.8	GP1U267R	GP1U277R	GP1U287R	GP1U287Q	

Internal Block Diagram

Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Rating	Unit
Supply voltage	V _{CC}	0 to 6.3	V
*1 Operating temperature	T _{opr}	- 10 to + 70	°C
Storage temperature	T _{stg}	- 20 to + 70	°C
*2 Soldering temperature	T _{sol}	260	°C

*1 No dew condensation is allowed.

*2 For 5 seconds

Recommended Operating Conditions

Parameter	Symbol	Operating conditions	Unit
Supply voltage	V _{CC}	4.7 to 5.3	V

■ Electrical Characteristics

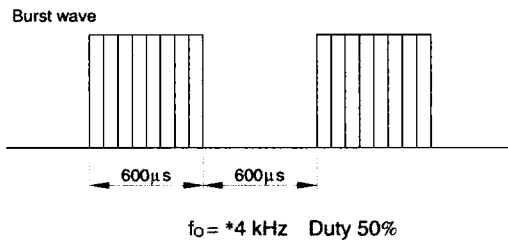

(Ta=25°C, Vcc=+5V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Dissipation current	I _{CC}	No input light	-	-	5.0	mA
High level output voltage	V _{OH}	*3	V _{CC} - 0.5	-	-	V
Low level output voltage	V _{OL}		-	-	0.45	V
High level pulse width	T ₁		400	-	800	μs
Low level pulse width	T ₂		400	-	800	
B.P.F. center frequency	f ₀		-	-	*4	-

*3 The burst wave as shown in the following figure shall be transmitted by the transmitter shown in Fig. 1.

The carrier frequency of the transmitter, however, shall be same as *4, and measurement shall be taken of the 100th and subsequent pulses after start of transmission.

*4 The B.P.F. center frequency f₀ varies with model, as shown in ■ Model Line-ups .

■ Performance

Using the transmitter shown in Fig. 1, the output signal of the light detecting unit is good enough to meet the following items in the standard optical system in Fig. 2.

(1) Linear reception distance characteristics

When L=0.2 to 6.5 m, E_e^{*5} < 10 lx and φ = 0° in Fig. 2, the output signal shall meet the electrical characteristics in the attached list.

(2) Sensitivity angle reception distance characteristics

When L=0.2 to 4.5 m, E_e^{*5} < 10 lx and φ <= 30° in Fig. 2, the output signal shall meet the electrical characteristics in the attached list.

(3) Anti outer peripheral light reception distance characteristics

When L=0.2 to 3 m, E_e^{*6} <= 300 lx and φ = 0° in Fig. 2, the output signal shall meet the electrical characteristics in the attached list.

*5 It refers to detector face illuminance.

*6 Outer peripheral light source : CIE standard light source A shall be used and placed at 45° from perpendicular axis at the detector face center.

In the above figure, the transmitter should be set so that the output V_{out} can be 40mV p.p.

However, the PD49PI to be used here should be of the short-circuit current I_{SC} = 2.6 μA at E_v = 100 lx.

(E_v is an illuminance by CIE standard light source A (tungsten lamp).)

■ Precautions for Operation

- 1) In case of adopting the infrared light detecting unit for the wireless remote control, use it in accordance with the transmission scheme and the signal format recommended in "Countermeasures for malfunction prevention of home appliances with remote control" issued from Japan Association of Electrical Home Appliances (AEHA) in July, 1987. Use of a transmission scheme and a signal format different from those recommended may cause malfunction of home appliances. (Example : signal format without leader signal, bit structure of small duty ratio ($T_H/(T_H+T_L)$))
- 2) Use the light emitting unit (remote control transmitter), in consideration of performance, characteristics, operating conditions of light light emitting device and the characteristics of the light detecting unit.
- 3) Pay attention to a malfunction of the light detecting unit when the surface is stained with dust and refuse. Care must be taken not to touch the light detector surface. If it should be dirty, wipe off such dust and refuse with soft cloth so as to prevent scratch. In case some solvents are required, use methyl alcohol, ethyl alcohol or isopropyl alcohol only. Also, protect the light detecting unit against flux and others, since their deposition on the unit inside causes reduction of the function, fading of markings such as the part number.
- 4) The shield case should be grounded on PWB pattern. (The area across the shield case and the GND terminal is internally conductive in some cases and non-conductive in some other cases.)
- 5) Do not apply unnecessary force to the terminal and the case.
- 6) Do not push the light detector surface (photodiode) from outside.
- 7) To avoid the electrostatic breakdown of IC, handle the unit under the condition of grounding with human body, soldering iron, etc.
- 8) Do not use hole and groove set in the case of the light detecting unit for other purposes, since they are required to maintain the specified performance.
