DESCRIPTION:

Potato Semiconductor's PO74G00A is designed for world top performance using submicron CMOS technology to achieve 1.125GHz TTL/CMOS output frequency with less than 1.5ns propagation delay.

This quadruple 2-input positive-NAND gate is designed for 1.65-V to 3.6-V V_{CC} operation.

The PO74G00A performs the Boolean function $Y = \overline{A \cdot B}$ or $Y = \overline{A} + \overline{B}$ in positive logic.

Inputs can be driven from either 3.3V or 5V devices. This feature allows the use of these devices as translators in a mixed 3.3V/5V system environment.
