

PE46120

Product Specification

Monolithic Phase & Amplitude Controller, 1.8–2.2 GHz

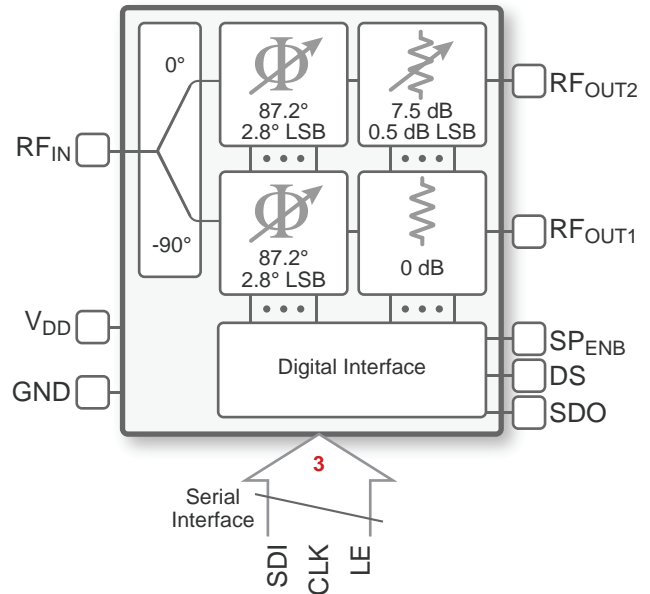

Features

- 90° phase splitter
- 5-bit digital phase shifter, 87.2° range, 2.8° resolution
- 4-bit digital step attenuator, 7.5 dB range, 0.5 dB resolution
- High power handling and linearity
 - P0.1dB of +35 dBm
 - Input IP3 of +60 dBm
- Packaging – 32-lead 6 × 6 mm QFN

Applications

- Wireless infrastructure
 - Macro cells
 - Small cells (micro, pico)
 - Distributed antenna systems (DAS)
- Precision phase shifter
- Dual polarization antenna alignment
- Analog linearization techniques

Figure 1 • PE46120 Block Diagram

Product Description

The PE46120 is a HaRP™ technology-enhanced monolithic phase and amplitude controller (MPAC) designed for precise phase and amplitude control of two independent RF paths. It optimizes system performance while reducing manufacturing costs of transmitters that use symmetric or asymmetric power amplifier designs to efficiently process signals with large peak-to-average ratios.

This monolithic RFIC integrates a 90° RF splitter, digital phase shifters and a digital step attenuator along with a low voltage CMOS serial interface. It can cover a phase range of 87.2° in 2.8° steps and an attenuation range of 7.5 dB in 0.5 dB steps, while providing excellent phase and amplitude accuracy from 1.8–2.2 GHz.

The PE46120 also features exceptional linearity, high output port-to-port isolation and extremely low power consumption relative to competing module solutions. It is offered in a 32-lead 6 × 6 mm QFN package.

The PE46120 is manufactured on Peregrine's UltraCMOS® process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS. Peregrine's HaRP™ technology enhancements deliver high linearity and excellent harmonics performance.

Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in **Table 1** may cause permanent damage. Operation should be restricted to the limits in **Table 2**. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in **Table 1**.

Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.

Table 1 • Absolute Maximum Ratings for PE46120

Parameter/Condition	Min	Max	Unit
Supply voltage, V_{DD}	-0.3	5.5	V
Digital input voltage	-0.3	3.6	V
Maximum input power		35	dBm
Storage temperature range	-65	+150	°C
ESD voltage HBM ⁽¹⁾			
All pins		500	V
RF pins to GND		1000	V
ESD voltage CDM, all pins ⁽²⁾		1000	V
Notes:			
1) Human body model (MIL-STD 883 Method 3015.7).			
2) Charged device model (JEDEC JESD22-C101).			

Recommended Operating Conditions

Table 2 lists the recommending operating condition for PE46120. Devices should not be operated outside the recommended operating conditions listed below.

Table 2 • Recommended Operating Condition for PE46120

Parameter	Min	Typ	Max	Unit
Supply voltage, $V_{DD}^{(1)}$	2.3		5.5	V
Supply current		350	500	μ A
Digital input high	1.17		3.6	V
Digital input low	0		0.6	V
Digital input leakage		10	20	μ A
RF input power, CW			29	dBm
RF input power, pulsed ⁽²⁾			32	dBm
Operating temperature range	-40	+25	+105	$^{\circ}$ C
Notes: 1) Product performance does not vary over V_{DD} . 2) Pulsed, 5% duty cycle of 4620 μ s period.				

Electrical Specifications

Table 3 provides the PE46120 key electrical specifications at 25 °C, $V_{DD} = 2.3\text{--}5.5\text{V}$, 50Ω, unless otherwise specified.

Table 3 • PE46120 Electrical Specifications

Parameter	Path	Condition	Min	Typ	Max	Unit
Operating frequency			1.8		2.2	GHz
Insertion loss	RF _{IN} to RF _{OUTX}	Reference phase and minimum attenuation state. Includes 3 dB from power divider.		6.9	7.4	dB
Input return loss	RF _{IN}	1.8–2.2 GHz		15		dB
Output return loss	RF _{OUT1} or RF _{OUT2}	1.8–2.2 GHz		15		dB
Isolation	RF _{OUT1} to RF _{OUT2}	1.8–2.2 GHz Reference phase and minimum attenuation state.	27.5	30		dB
Input 0.1dB compression point ⁽¹⁾	RF _{IN} to RF _{OUT1} or RF _{OUT2}	1.8–2.2 GHz		35		dBm
Input IP3	RF _{IN} to RF _{OUT1} or RF _{OUT2}	1.8–2.2 GHz		60		dBm
Switching time ⁽²⁾		50% LE to 90% or 10% RF final value		980	1220	ns
Phase shift range	RF _{IN} to RF _{OUT1} or RF _{OUT2}			87.2		deg
Phase step				2.8		deg
Relative phase shift	RF _{OUT1} to RF _{OUT2}	Phase (RF _{OUT1})–Phase (RF _{OUT2}) [same state]		–90		deg
Attenuation range	RF _{IN} to RF _{OUT2}			7.5		dB
Attenuation step				0.5		dB
Notes:						
1) The input 0.1dB compression point is a linearity figure of merit. Refer to Table 2 for the operating RF input power (50Ω).						
2) Worst case state transition. All bits changing.						

Switching Frequency

The PE46120 has a maximum 25 kHz switching frequency.

The switching frequency is defined to be the rate at which the PE46120 can be continuously toggled across attenuation and phase states.

Control Logic

Table 4–Table 10 provide the control logic truth tables for the PE46120.

Table 4 • Bit Descriptions

C0	Channel register select
	C0 = L, channel RF _{OUT1} register select
	C0 = H, channel RF _{OUT2} register select

Table 10 • Serial Interface Timing Characteristics⁽¹⁾

Parameter/Condition	Min	Max	Unit
Serial clock frequency, $F_{CLK}^{(2)}$	0.032	26	MHz
Serial clock period, T_{SCLK}	40		ns
Serial clock HIGH time, T_{SCLKH}	20		ns
Serial clock LOW time, T_{SCLKL}	20		ns
Serial data output propagation delay from CLK falling edge, T_{OV} (10 pF)		9	ns
Latch clock pulse width high, T_{LCLKH}	10		ns
Serial data input setup time from CLK rising edge, T_{SU}		5	ns
Serial data input hold time from CLK rising edge, T_H		2	ns
Serial data output hold time from CLK rising edge, T_{OH}	1.6		ns
Serial clock rising edge setup time to latch clock rising edge, T_{SETTLE}		27	ns
SDO drive strength ⁽³⁾		15	pF

Notes:

- 1) $V_{DD} = 2.3V-5.5V$, $-40\text{ }^{\circ}C < T_A < +105\text{ }^{\circ}C$, unless otherwise specified.
- 2) Limited by test duration not static logic design. Synchronous to clock. Minimum clock frequency tested = 32 kHz.
- 3) SDO maximum capacitive load drive strength for $F_{CLK} = 26\text{ MHz}$ with a 1.8V swing.

Programming Options

Serial Interface

The serial interface is a 14-bit serial-in shift register with two parallel-out channel registers RF_{OUT1} and RF_{OUT2} buffered by a transparent latch. The 14 bits are comprised of four bits defining the attenuation setting and five bits for the phase shift setting. Channel register RF_{OUT1} and RF_{OUT2} selection is determined by the value of the C0 bit contained as part of the 14-bit program word.

The serial interface is controlled using three CMOS compatible signals: serial data in (SDI), clock (CLK) and latch enable (LE). The SDI and CLK inputs allow data to be serially entered into the shift register. Serial data is clocked in starting with two spare bits first and then the phase setting LSB. The shift register must be

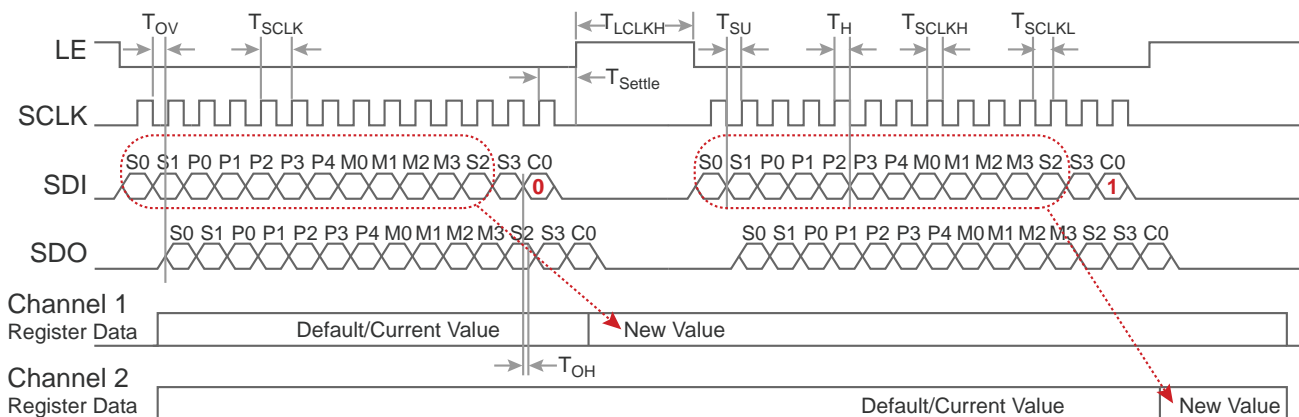

loaded while LE is held LOW to prevent the internal channel register values from changing as data is entered. The LE input should then be toggled HIGH, latching the new data into the PE46120. SDO is a clock delayed reply of the user's input SDI command for functional confirmation.

Phase shift and attenuation setting truth tables are listed in **Table 6** and **Table 7**. The serial timing diagram is illustrated in **Figure 2** and associated AC characteristics are listed in **Table 10**.

Power-up Control Settings

The PE46120 will power up in one of two default states depending upon the setting of the default state (DS) pin, as defined in **Table 8** and **Table 9**. No specific signal sequencing is required for the default state to be set and active once V_{DD} is applied.

Pin Information

This section provides pinout information for the PE46120. **Figure 24** shows the pin map of this device for the available package. **Table 11** provides a description for each pin.

Figure 24 • Pin Configuration (Top View)

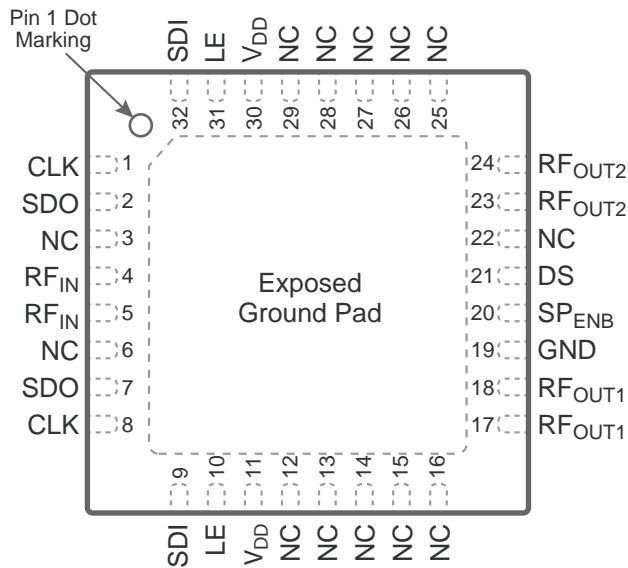

Table 11 • Pin Descriptions for PE46120

Pin No.	Pin Name	Description
1, 8	CLK ⁽¹⁾	Clock input
2, 7	SDO ⁽²⁾	Serial data output
3, 6, 12–16, 22, 25–29	NC	No connect
4, 5	RF _{IN} ⁽³⁾	RF input
9, 32	SDI ⁽¹⁾	Serial data input
10, 31	LE ⁽¹⁾	Latch enable
11, 30	V _{DD} ⁽¹⁾	Supply voltage
17, 18	RF _{OUT1} ⁽³⁾	RF output 1
19	GND ⁽⁴⁾	Ground
20	SP _{ENB} ⁽⁵⁾⁽⁶⁾	Serial port enable
21	DS ⁽⁶⁾	Default state at power up select
23, 24	RF _{OUT2} ⁽³⁾	RF output 2
Pad	GND	Exposed pad: ground for proper operation

Notes:

- 1) Pins are internally connected, signal only needs to be applied to one of the pins. The alternate unused pin needs to be left floating.
- 2) SDOs are independently buffered outputs of the same signal.
- 3) RF pins 4, 5, 17 and 18 must be at 0 VDC. The RF pins do not require DC blocking capacitors for proper operation if the 0 VDC requirement is met.
- 4) Pin 19 must be grounded for proper function.
- 5) Must be active low for normal SPI operation. Logic high programs 0 dB attenuation setting and 0° phase setting. Setting back to logic low returns to the previously programmed state.
- 6) Pin has an internal 100 kΩ pull-up resistor.

Packaging Information

This section provides packaging data including the moisture sensitivity level, package drawing, package marking and tape-and-reel information.

Moisture Sensitivity Level

The moisture sensitivity level rating for the PE46120 in the 32-lead 6 × 6 mm QFN package is MSL1.

Package Drawing

Figure 25 • Package Mechanical Drawing for 32-lead 6 × 6 × 0.85 mm QFN

Top-Marking Specification

Figure 26 • Package Marking Specifications for PE46120

- = Pin 1 indicator
- YY = Last two digits of assembly year
- WW = Assembly work week
- ZZZZZZZZ = Assembly lot code (maximum eight characters)

Tape and Reel Specification

Figure 27 • Tape and Reel Specifications for 32-lead 6 × 6 × 0.85 mm QFN

A0	6.30 ± 0.10
B0	6.30 ± 0.10
K0	1.10 ± 0.10
D0	1.50 + 0.1/ -0.0
D1	1.5 min
E	1.75 ± 0.10
F	7.50 ± 0.10
P0	4.00
P1	12.00 ± 0.10
P2	2.00 ± 0.10
T	0.30 ± 0.05
W0	16.00 ± 0.30

Notes:

1. 10 Sprocket hole pitch cumulative tolerance ±0.2
2. Camber in compliance with EIA 481
3. Pocket position relative to sprocket hole measured as true position of pocket, not pocket hole

Dimensions are in millimeters unless otherwise specified

Device Orientation in Tape

Ordering Information
